What this book is, and what it is not

Every page is one chart and one question. There is no score, no target and no call. The daily email picks the charts worth a look across the whole market each night; this book does the opposite and shows every view of one ticker.

WANT THE WRITTEN READ ON BTC?

Ticker Breakdown is the companion report: the full indicator roster in tables, where the timeframes agree and disagree, and a plain-English summary of each, with a couple of the charts. This book is the visual side; the report is the written side. tickerbreakdown.com/pricing

THE DAILY CHARTS

The charts worth seeing after each close, best first, in your inbox. technicalsvisualized.com

Not in this book, and why: Daily: relative strength (the engine's benchmark for this pool is BTC itself).

Not investment advice. Technicals Visualized publishes impersonal, general-circulation chart readings and does not provide individualised investment advice. Prices: daily closes from our price cache, adjusted for corporate actions; weekly and monthly bars count only closed periods.
